   2.3 Research Objectives and Hypotheses 3
   2.4 Methodological Approach 4
   2.5 Expected Outcomes 4
   2.6 Relevant Experiences and Skills for your Doctoral Research 4
3. References 5
4. Work Plan 6

1. Abstract

Max. 1 page

An abstract is an independent, short and meaningful description of the longer, subsequent project description. It should include the objective, thematic scope, methods and conclusions. In addition, up to five keywords can be mentioned here.

2. PhD Proposal

Max. 10 pages

2.1 State of the Art

The thorough literature research and its discussion is the first step in the preparation of the proposal. The point of a research proposal is not to present the history of the field, but to briefly and precisely present the current status in the chosen research area.

2.2 Relationship to the Research of the preferred Chair

This chapter explains why your research project should be assigned to the preferred chair and how the project can contribute to the scientific development of the chair.

2.3 Research Objectives and Hypotheses

The objectives should result directly from the state of the art and your own preliminary work. If it is suitable, a hypothesis is formulated. In addition, intermediate goals that contribute to answering the actual research question can be defined. The objectives can serve as a structure in the work plan.

2.4 Methodological Approach

The methodological approach describes how the research question is to be answered, which methods will be used and why exactly these and no other methods will be used. It must be clear that the planned procedure is well considered and that the planned procedures are feasible.

2.5 Expected Outcomes

The expected results of the project are to be described in more detail and how they contribute to the knowledge in the respective research area. It should be outlined, how the novel outcomes can increase the impact of the project in a broader scientific, social, economic or technological way.

2.6 Relevant Experiences and Skills for your Doctoral Research

Please outline skills and methods you have already used, such as programming, lab, field or management experiences. Please mention also non-academic related skills relevant for your research, not exam knowledge from former study courses.

3. References

Please add a list of the references you have cited in your proposal. This list should be complete and consistently formatted.

4. Work Plan

A work plan as a Gantt chart must be attached. The plan includes the listing of the individual work packages and the estimated amount of time to complete the work packages. In addition to the intermediate goals to be achieved (including periods for research, analysis and writing), the compulsory curriculum or research stays abroad should be taken into account.
